Anti Aging for Hair!™

Proven 88% effective at restoring the hair to it's appearance 3-5 years before! Safe for men & women without side effects!

Results shown
after 9-12 months

Dr. Khadavi, MD
Board Certified
Dermatologist
Creator of Revivogen

Revivogen Scalp Therapy

Revivogen Scalp Therapy is a natural solution for hair loss, dermatologically tested and suitable for both men and women.

The formula of Revivogen Scalp Therapy contains natural ingredients that reduce the production of DHT, the function of androgen receptor and inhibit its growth.

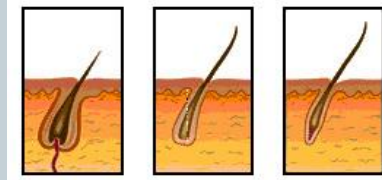

Revivogen Scalp Therapy is the most powerful and effective topical treatment with anti DHT ingredients that are scientifically proven.

Both subtypes of the enzyme 5-AR (the enzyme that converts testosterone into DHT) inhibited and even blocked the deployment of DHT to androgen receptors.

The functions of Revivogen Scalp Therapy

The formula of Revivogen Scalp Therapy combats the problem of hair loss with 5 different mechanisms, including addressing all known causes of androgenetic alopecia:

1. Inhibits the production of the local hormone DHT
2. Inhibits the function of local androgen receptor
3. Improves the development of hair follicles
4. It strengthens the hair and prevents hair loss
5. Increases the size and thickness of hair follicles

It is scientifically proven that by inhibiting the enzyme 5-AR, the androgen receptor and reducing the concentration of DHT in the scalp, Revivogen Scalp Therapy helps hair to revitalize and protect the hair follicle.

Revivogen Scalp Therapy has no side effects and is suitable for both men and women.

Revivogen Bio-Cleansing Shampoo

Revivogen Bio-Cleansing Shampoo is designed to make your hair stronger, thicker and healthier without drugs and without side effects!

By directly targeting the cause of hair loss at the cellular and molecular level, Revivogen Bio-Cleansing Shampoo is a unique product that rejuvenates and protects your hair by using the power of nature.

Revivogen Bio-Cleansing Shampoo cleanses your hair and removes sebum and residues of the hormone DHT from the scalp.

The specially designed Revivogen Bio-Cleansing Shampoo contains the necessary bio-active nutrients that improves the condition of the hair and scalp, it creates ideal conditions for new hair growth.

Revivogen Bio-Cleansing Shampoo contains many of the active ingredients of Revivogen Natural Scalp Therapy providing the following:

- cleanses hair and scalp
- contains powerful detergents
- contains 100% natural ingredients
- contains ingredients that reduce the production of DHT and block its operation
- reinforces and strengthens the hair and prevents hair loss
- creates an ideal environment for healthy hair growth
- suitable for men and women, without side effects

The functions of Revivogen Bio-Cleansing Shampoo

Revivogen Bio-Cleansing Shampoo is made from natural ingredients that are scientifically proven:

1. It provides inhibition of the enzyme 5-AR and reducing DHT production
2. It blocks the androgen receptor and prevents it from connecting with DHT
3. It leads to the development of the hair follicles
4. Increases the size and thickness of the hair follicles
5. Soothe, moisturize and restore the damaged and weak hair.

Revivogen Thickening Conditioner

Revivogen Thickening Conditioner makes your hair softer and fuller. By using this special, all-natural conditioner, your hair will look full and healthy.

Revivogen Conditioner contains dermatologically tested natural protein that makes hair shinier and stronger, and increases the volume of the hair.

The functions of Revivogen Thickening Conditioner

Forget broken, limp and dull hair. You can see the spectacular results after the first use, your hair will be thicker, stronger and feel firmer.

Revivogen Thickening Conditioner contains ingredients that adds volume, strength and increases stamina to your hair whenever you use it.

Specially designed for weak and damaged hair, for people with hair loss and for those who use lotions that contain alcohol used against Androgenetic Alopecia, because alcohol dries up the hair and becomes brittle and dull.

How does Revivogen work

The patented formula of Revivogen Thickening Conditioner contains natural herbs and nutrients with proven moisturizing, firming, calming and restorative effect. These natural nutrients keeps your hair better hydrated and adds more volume.

It contains the highest quality amino acids and pantothenic acid (vitamin B-5) that gives shine to the hair. Herbal extracts reduce the oiliness of the hair and ensure a gentle treatment. It also restores volume and shine to the hair and contains natural oat and wheat proteins that strengthen the hair.

How It Works

Dermatologist-formulated to stop hair loss at the source.

If you're experiencing hair loss or thinning hair, you're not alone. Millions of men and women are faced with thinning hair during their lifetimes, and there's an overwhelming demand for an easy, effective solution to stop hair loss and regrow hair. That's where Revivogen® comes in. Formulated by a dermatologist with scientifically proven natural ingredients that target the root cause of hair loss, Revivogen represents a comprehensive, clinically proven hair loss solution that takes a multifaceted approach to target the root cause of hair loss.

Your Hair Loss

Revivogen's proven, natural ingredients deliver results without side effects. With just three simple steps, Revivogen makes it easy to do something about your thinning hair. The revolutionary Scalp Therapy, Bio Cleansing Shampoo, and Thickening Conditioner were developed by a dermatologist to provide maximum results naturally.

Revivogen works because of its two most unique properties:

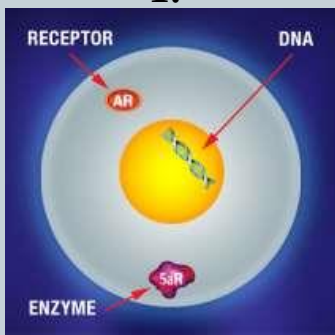

- Safe, effective ingredients.
- An advanced delivery system.

The natural ingredients were selected because independent medical studies have proven that they replicate the actions of prescription medications-without the potential side effects. These ingredients target the root cause of thinning hair and stimulate the hair follicles to grow normal hair again.

The Science

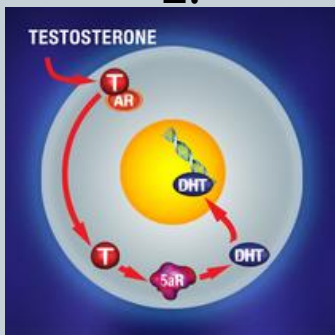

1.

DNA resides in the nuclei of the cells, and provides genetic blueprints that instruct cells how to act. The process of hair growth is part of our genetic makeup, and the DNA inherited from both parents dictates one's predisposition to hair loss. When these hair loss genes are present, they can be triggered by DHT, a hormone present in both men and women after puberty.

Hair loss is genetic but can be stopped and reversed.

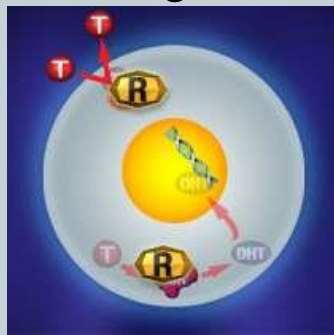

2.

The enzyme 5-alpha reductase (5AR) is present within the hair follicle cells. This enzyme is responsible for converting testosterone to DHT, which interacts with the hair loss genes and hinders normal hair production.

Revivogen inhibits 5AR enzymes to reduce DHT production.

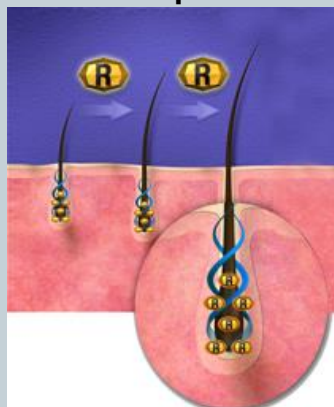

3.

When testosterone enters the hair follicle cells through gateways known as androgen receptors, it interacts with enzymes that convert it to DHT (Di-Hydro Testosterone) an unwanted byproduct.

Revivogen blocks the androgen receptors and prevents testosterone from entering the cell.

4.

When DHT production is reduced, hair loss genes become dormant, hair loss ceases and the follicles begin producing healthy, normal hair once again.

For even more dramatic results, Revivogen also contains natural ingredients that have been proven to stimulate the hair follicles and activate their growth phase.

How To Use

Three simple steps that stop hair loss

The Revivogen® system features three products that work synergistically to halt the production of DHT, which is the root cause of hair loss. Revivogen's Scalp Therapy, Bio-Cleansing Shampoo and Thickening Conditioner integrate easily into any Haircare routine, and provide visible results without any extra steps.

Revivogen's Scalp Therapy features a potent combination of natural anti-DHT ingredients along with hair-growth stimulators that penetrate deep into the hair follicle where 95 percent of the DHT in the body is produced. The most important step in the Revivogen regimen, Scalp Therapy, delivers results when rubbed into the scalp for 10 to 20 seconds each night.

The Bio-Cleansing Shampoo features the same ingredients found in the Scalp Therapy and helps remove DHT from the scalp's surface and promote a healthy environment for optimal hair-growth. For optimal results, massage into the hair and scalp to create a rich lather, and leave on for a few minutes to ensure penetration.

After the Bio-Cleansing Shampoo, Revivogen's Thickening Conditioner adds thickness and volume to limp and thinning hair. With natural proteins that surround each individual hair shaft, it creates fuller hair instantly with dramatically more body. For best results, use each product as directed.

To see a demonstration video [Click Here](#)

1. Comb hair back.

2. Turn the nozzle so it points towards your scalp.

3. Place the nozzle on your scalp. Apply 10-20 sprays (1-2ml) once a day depending on the size of the affected area.

4. If the Scalp Therapy starts to run, massage into scalp. Leave on scalp for at least hours or overnight.

What To Expect

Revivogen® is designed to significantly reduce hair loss within the first three months of use. Clinical testing has proven that when used properly, the natural ingredients found in Revivogen stop the hair loss cycle and promote the growth of healthy, normal hair.

The first two to four weeks:

After starting the Revivogen regimen, some users experience increased shedding-but this means the products are working. This initial hair loss occurs because Revivogen activates the hair's growth cycle. When this occurs, the hairs in the transition or resting phases fall out as the follicles' new growth cycle begins.

Within 60 to 90 days:

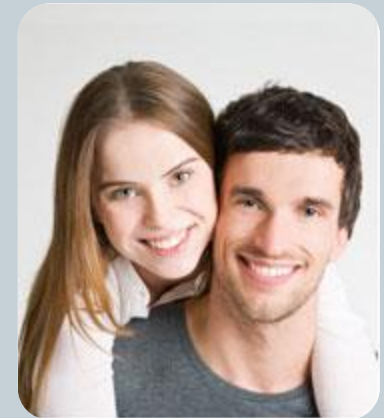

After two to three months, Revivogen significantly reduces hair loss and visibly increases the thickness of existing hair.

Within three to six months:

With regular, proper use, Revivogen continues to thicken existing hair and deliver a noticeable increase in scalp fullness.

After 16 to 18 months:

Once maximum improvement is achieved, it is no longer necessary to use Revivogen daily. At this point, using the products three to five times per week maintains results.

Revivogen Ingredients

The active ingredients of Revivogen are natural compounds proven to inhibit 5-alpha reductase (the enzyme that produces DHT), block the androgen receptor and stimulating hair growth. Revivogen is the only product containing these ingredients in 1 easy to use formula.

GLA, ALA, Linoleic Acid & Oleic Acid

Gamma Linolenic Acid (GLA), Alpha Linolenic Acid (ALA), Linoleic and Oleic Acid are essential fatty acids found in plant oils. These fatty acids have been individually proven to inhibit 5-Alpha Reductase. In fact these are the most powerful inhibitors of 5-Alpha Reductase known today and not only they inhibit the Type II form of the 5-Alpha Reductase which other products like Propecia® inhibit, but also the Type I form of the enzyme which is present in high concentrations in the scalp, sebaceous glands, and the skin. Additionally GLA, ALA and Oleic acid have potent anti-inflammatory properties.

Azelaic Acid, Vitamin B6 and Zinc

Azelaic acid is a naturally occurring dicarboxylic acid found in whole grain cereals, rye, barley and animal products. It is FDA approved as a topical preparation for treatment of acne and is effective against a number of other skin conditions when applied topically. There is strong scientific evidence that Azelaic Acid and Zinc are potent inhibitors of 5-Alpha-Reductase. When Azelaic acid, Vitamin B6 and Zinc Sulfate were added together at very low concentrations, 90% inhibition of 5 Alpha-Reductase activity was obtained. The activity of these compounds against 5-Alpha-Reductase makes this combination very effective in treatment of male pattern baldness.

Procyanidin Oligomers

Procyanidin Oligomers are naturally derived ingredients that have shown to stimulate hair growth similarly to Minoxidil. Studies by Japanese scientists have shown that Procyanidin Oligomers possess growth stimulation activity toward hair epithelial cells in vitro and stimulate anagen induction in hair follicles in vivo. Addition of Procyanidin Oligomers to Revivogen is intended to increase the hair growth stimulation properties of the formula

Saw Palmetto Extract

Saw Palmetto has shown to effectively block DHT and is also believed to block the androgen receptors which are found on the hair follicles. Like GLA and ALA it also blocks Type 1 and Type 2 forms of 5 alpha-reductase and has shown to be more potent than Finasteride, the active ingredient of Propecia.

Before & After

Before

After

Female, 40's
Moderate diffused thinning.
Results shown after 6 months.

Male
Mild hair loss affecting the crown and top of scalp. Results shown after 12 months. (User submitted photo)

Testimonial

" I am a rather skeptical person. When I was introduced to Revivogen, I must admit that I was hesitant to use the product. I had tried many other products and incurred thousands of dollars in costs with no results. However, after using Revivogen, I noticed dramatic results in a few months. I received numerous compliments about the thickness of my hair. My greatest insecurity was my hair loss problem. Now that I have found this product, worries about hair-loss no longer trouble me. "

Revivogen User Trial

The Revivogen user trial was intended to provide a reliable and identifiable user feedback about Revivogen' effects for hair loss. The participants in the hair loss trials were enrolled independently by filing out a questionnaire on Regrowth.com and were chosen by Revivogen according to the following criteria:

1. Male or Female ages 18-65
2. Mild to Moderate Hair loss due to Androgenetic Alopecia for 5 years or less
3. Not using Propecia, Rogaine, or other products for hair loss before or during the trial period
4. Free of any major ailment and not using any other medication.

The participants agreed to use Revivogen exclusively for one year and provide their feedback in exchange for free products. The feedback is directly emailed by the participants to the participating websites for independent verification and authentication.

Out of 39 participants in the Hair Loss Trials , 30 (77%) reported experiencing positive results including decreased hair loss and increased thickness of the hair. 9 users (23%) have reported no benefits.

You can review the individual assessments to draw your own conclusions.

Send an email to info@hbint.nl and we will send you all the 39 individual assessments.

There were also 2 independent studies conducted. 1 from a group of Russian hair specialists and 1 double-blind study of 3 dermatologists.

To see the full reports of these studies you can send an email to info@hbint.nl and we will be happy to send them.

FAQ

Does Revivogen have any side effects?

No, not when used as directed. Revivogen`s active ingredients are made from natural substances that have a long history of use both orally and locally. The only side effect noted with the use of this product is a mild scalp irritation in less than 2% of users.

Will my hair come back at already balding spots?

Revivogen is intended to prevent further hair loss. In some cases, and then only in places where the hair grew until recently, the hair can come back.

When should I start the treatment?

We recommend to the start with treatment as soon as possible. The greatest success is achieved in young people with an incipient form of hair loss.

Can I use other hair products or color my hair while I use Revivogen?

Yes. You can use any other type of hair care products while using Revivogen, including hair color and styling products. You can even wear a hat. If additional topical treatments such as Spectral.DNC (Minoxidil), remember to apply them at least three hours later to avoid each intervention with absorption of Revivogen`s active ingredients.

Should I use Revivogen my whole life?

Once you reach your goals, you must continue the use Revivogen to preserve your new born hairs, because your body is continuously producing DHT. However, in contrast to many other products, the frequency of the Revivogen application can be, in the course of time, reduced and finally reduced to the use of three to five times per week. This usually takes twelve to sixteen months after you`ve started.

Is the treatment for both men and women?

Yes, and we have many satisfied male and female customers. Surprisingly, the cause of hair loss in women is in most cases the same as men. Fortunately for women, estrogen helps to protect the hair follicle from the destructive effects of DHT. However, many women develop thinning hair and hair loss due to fluctuations in estrogen level and / or overproduction of DHT.
